1.0 Introduction

This program directory is intended for system programmers who are responsible for program installation and maintenance. It contains information about the material and procedures associated with the installation of IBM Developer for z Systems Host Utilities. This publication refers to IBM Developer for z Systems Host Utilities as Developer for z Systems Host Utilities.

Developer for z Systems Host Utilities is available as a component of multiple products. Depending on which product you acquired, different functions of Developer for z Systems Host Utilities will be enabled or disabled.

- IBM Developer for z Systems V14.0.0, program number 5724-T07 (web download)
- IBM Developer for z Systems Enterprise Edition V14.0.0, program number 5655-AC5 (Shopz orderable)

The Program Directory contains the following sections:

- 2.0, “Program Materials” on page 3 identifies the basic program materials and documentation for Developer for z Systems Host Utilities.
- 3.0, “Program Support” on page 6 describes the IBM support available for Developer for z Systems Host Utilities.
- 4.0, “Program and Service Level Information” on page 8 lists the APARs (program level) and PTFs (service level) that have been incorporated into Developer for z Systems Host Utilities.
- 5.0, “Installation Requirements and Considerations” on page 9 identifies the resources and considerations that are required for installing and using Developer for z Systems Host Utilities.
- 6.0, “Installation Instructions” on page 16 provides detailed installation instructions for Developer for z Systems Host Utilities. It also describes the procedures for activating the functions of Developer for z Systems Host Utilities, or refers to appropriate publications.

The rest of this section only applies when Developer for z Systems Host Utilities is ordered via Shopz. It does not apply when you downloaded it from the web. Select this link to go to the next section: 1.1, “Developer for z Systems Host Utilities Description” on page 2

Before installing Developer for z Systems Host Utilities, read the CBPDO Memo To Users and the CBPDO Memo To Users Extension that are supplied with this program in softcopy format and this program directory; then keep them for future reference. Section 3.2, “Preventive Service Planning” on page 6 tells you how to find any updates to the information and procedures in this program directory.

Developer for z Systems Host Utilities is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The program directory that is provided in softcopy format on the CBPDO tape is identical to the hardcopy format if one was included with your order. All service and HOLDDATA for Developer for z Systems Host Utilities are included on the CBPDO tape.
Do not use this program directory if you install Developer for z Systems Host Utilities with a SystemPac or ServerPac. When you use one of those offerings, use the jobs and documentation supplied with the offering. The offering will point you to specific sections of this program directory as needed.

1.1 Developer for z Systems Host Utilities Description

Similar to functions available on the IBM Developer for z Systems client, IBM Developer for z Systems Host Utilities provides code analysis tools. A benefit of doing code analysis on the host is that it can be integrated in your daily batch processing.

1.2 Developer for z Systems Host Utilities FMIDs

Developer for z Systems Host Utilities consists of the following FMIDs:

   HAKGE00
2.0 Program Materials

An IBM program is identified by a program number.

Developer for z Systems Host Utilities is available as a component of multiple products. Depending on which product you acquired, different functions of Developer for z Systems Host Utilities will be enabled or disabled.

- IBM Developer for z Systems V14.0.0, program number 5724-T07 (web download)
- IBM Developer for z Systems Enterprise Edition V14.0.0, program number 5655-AC5 (Shopz orderable)

Basic Machine-Readable Materials are materials that are supplied under the base license and are required for the use of the product.

The program announcement material describes the features supported by Developer for z Systems Host Utilities. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is physical media or downloadable files. This program is in SMP/E RELFILE format and is installed by using SMP/E. See 6.0, "Installation Instructions" on page 16 for more information about how to install the program.

The rest of this section only applies when Developer for z Systems Host Utilities is ordered via Shopz. It does not apply when you downloaded it from the web.

Select this link to go to the next section: 2.2, “Optional Machine-Readable Material” on page 4

You can find information about the physical media for the basic machine-readable materials for Developer for z Systems Host Utilities in the CBPDO Memo To Users Extension.

Figure 1 describes the program file content for Developer for z Systems Host Utilities. You can refer to the CBPDO Memo To Users Extension to see where the files reside on the tape.

Notes:

1. The data set attributes in this table must be used in the JCL of jobs that read the data sets. However, because the data sets are in IEBCOPY unloaded format, their actual attributes might be different.

2. If any RELFILEs are identified as PDSEs, ensure that SMPTLIB data sets are allocated as PDSEs.
2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for Developer for z Systems Host Utilities.

2.3 Program Publications

The following sections identify the basic publications for Developer for z Systems Host Utilities.

Figure 2 identifies the basic unlicensed program publications for Developer for z Systems Host Utilities. Those that are in softcopy format publications can be obtained from the IBM Publications Center website at http://www.ibm.com/shop/publications/order/.

<table>
<thead>
<tr>
<th>Publication Title</th>

</tr>
</tbody>
</table>

Note:
1. These, and other, publications can be obtained from the Developer for z Systems Host Utilities online library, http://www-01.ibm.com/support/docview.wss?uid=swg27048563.
2.3.1 Optional Program Publications

No optional publications are provided for Developer for z Systems Host Utilities.

2.4 Program Source Materials

No program source materials or viewable program listings are provided for Developer for z Systems Host Utilities.

2.5 Publications Useful During Installation

You might want to use the publications listed in Figure 3 during the installation of Developer for z Systems Host Utilities.

<table>
<thead>
<tr>

</table>

Figure 3. Publications Useful During Installation
3.0 Program Support

This section describes the IBM support available for Developer for z Systems Host Utilities. The service number for Developer for z Systems Host Utilities is 0513891.

3.1 Program Services

Contact your IBM representative for specific information about available program services.

3.2 Preventive Service Planning

Before you install Developer for z Systems Host Utilities, make sure that you have reviewed the current Preventive Service Planning (PSP) information. Review the PSP Bucket for General Information, Installation Documentation, and the Cross Product Dependencies sections. For the Recommended Service section, instead of reviewing the PSP Bucket, it is recommended you use the IBM.ProductInstall-RequiredService fix category in SMP/E to ensure you have all the recommended service installed. Use the FIXCAT(IBM.PRODUCTINSTALL-REQUIREDSERVICE) operand on the APPLY CHECK command. See 6.1.14, “Perform SMP/E APPLY” on page 24 for a sample APPLY command.

If you obtained Developer for z Systems Host Utilities as part of a CBPDO, HOLDDATA is included.

If the CBPDO for Developer for z Systems Host Utilities is older than two weeks by the time you install the product materials, you can obtain the latest PSP Bucket information by going to the following website:

You can also use S/390 SoftwareXcel or contact the IBM Support Center to obtain the latest PSP Bucket information.

For program support, access the Software Support Website at http://www-01.ibm.com/software/support/.

PSP Buckets are identified by UPGRADEs, which specify product levels; and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for Developer for z Systems Host Utilities are included in Figure 4.

<table>

3.3 Statement of Support Procedures

Report any problems which you feel might be an error in the product materials to your IBM Support Center. You may be asked to gather and submit additional diagnostics to assist the IBM Support Center in their analysis.

[Figure 5 on page 7] identifies the component IDs (COMPID) for Developer for z Systems Host Utilities.

<table>
<thead>
<tr>

</tbody>
</table>
4.0 Program and Service Level Information

This section identifies the program and relevant service levels of Developer for z Systems Host Utilities. The program level refers to the APAR fixes that have been incorporated into the program. The service level refers to the PTFs that have been incorporated into the program.

4.1 Program Level Information

All resolved APARs of previous releases of Developer for z Systems Host Utilities have been incorporated into Developer for z Systems Host Utilities.

4.2 Service Level Information

No PTFs against this release of Developer for z Systems Host Utilities have been incorporated into the product package.

Frequently check the Developer for z Systems Host Utilities PSP Bucket for HIPER and SPECIAL attention PTFs against all FMIDs that you must install. You can also receive the latest HOLDDATA, then add the FIXCAT(IBM.PRODUCTINSTALL-REQUIREDSERVICE) operand on your APPLY CHECK command. This will allow you to review the recommended and critical service that should be installed with your FMIDs.
5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating Developer for z Systems Host Utilities. The following terminology is used:

- **Driving system**: the system on which SMP/E is executed to install the program.
  - The program might have specific operating system or product level requirements for using processes, such as binder or assembly utilities during the installation.

- **Target system**: the system on which the program is configured and run.
  - The program might have specific product level requirements, such as needing access to the library of another product for link-edits. These requirements, either mandatory or optional, might directly affect the element during the installation or in its basic or enhanced operation.

In many cases, you can use a system as both a driving system and a target system. However, you can make a separate IPL-able clone of the running system to use as a target system. The clone must include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Use separate driving and target systems in the following situations:

- When you install a new level of a product that is already installed, the new level of the product will replace the old one. By installing the new level onto a separate target system, you can test the new level and keep the old one in production at the same time.

- When you install a product that shares libraries or load modules with other products, the installation can disrupt the other products. By installing the product onto a separate target system, you can assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system required to install Developer for z Systems Host Utilities.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements
5.2 Target System Requirements

This section describes the environment of the target system required to install and use Developer for z Systems Host Utilities.

Developer for z Systems Host Utilities installs in the z/OS (Z038) SREL.

5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

5.2.2 Programming Requirements
5.2.2.1 Installation Requisites: Installation requisites identify products that are required and must be present on the system or products that are not required but should be present on the system for the successful installation of this product.

Mandatory installation requisites identify products that are required on the system for the successful installation of this product. These products are specified as PREs or REQs.

Developer for z Systems Host Utilities has no mandatory installation requisites.

Conditional installation requisites identify products that are not required for successful installation of this product but can resolve such things as certain warning messages at installation time. These products are specified as IF REQs.

Developer for z Systems Host Utilities has no conditional installation requisites.

5.2.2.2 Operational Requisites: Operational requisites are products that are required and must be present on the system or products that are not required but should be present on the system for this product to operate all or part of its functions.

Mandatory operational requisites identify products that are required for this product to operate its basic functions. These products are specified as PREs or REQs.

Developer for z Systems Host Utilities has no mandatory operational requisites.

Conditional operational requisites identify products that are not required for this product to operate its basic functions but are required at run time for this product to operate specific functions. These products are specified as IF REQs.

Developer for z Systems Host Utilities has no conditional operational requisites. However, the product in which you received Developer for z Systems Host Utilities contains multiple FMIDs, some of which provide services utilized by Developer for z Systems Host Utilities. See 6.4, “Product FMIDs” on page 27 for details.

5.2.2.3 Toleration/Coexistence Requisites: Toleration/coexistence requisites identify products that must be present on sharing systems. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD environment at different time intervals.

Developer for z Systems Host Utilities has no toleration/coexistence requisites.

5.2.2.4 Incompatibility (Negative) Requisites: Negative requisites identify products that must not be installed on the same system as this product.

Developer for z Systems Host Utilities has no negative requisites.
5.2.3 DASD Storage Requirements

Developer for z Systems Host Utilities libraries can reside on all supported DASD types.

Figure 7 on page 12 lists the total space that is required for each type of library.

<table>
<thead>
<tr>
<th>Library Type</th>
<th>Total Space Required in 3390 Trks</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target</td>
<td>35 Tracks</td>
<td></td>
</tr>
<tr>
<td>Distribution</td>
<td>21480 Tracks</td>
<td></td>
</tr>
<tr>
<td>File System(s)</td>
<td>43500 Tracks</td>
<td></td>
</tr>
<tr>
<td>Web Download</td>
<td>33839 Tracks</td>
<td>This row only applies when Developer for z Systems Host Utilities is downloaded from the web. It does not apply when you ordered it via Shopz. These are temporary data sets, which can be removed after the SMP/E install.</td>
</tr>
</tbody>
</table>

Notes:

1. For non-RECFM U data sets, IBM recommends using system-determined block sizes for efficient DASD utilization. For RECFM U data sets, IBM recommends using a block size of 32760, which is most efficient from the performance and DASD utilization perspective.

2. Abbreviations used for data set types are shown as follows.

   **U** Unique data set, allocated by this product and used by only this product. This table provides all the required information to determine the correct storage for this data set. You do not need to refer to other tables or program directories for the data set size.

   **S** Shared data set, allocated by this product and used by this product and other products. To determine the correct storage needed for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

   **E** Existing shared data set, used by this product and other products. This data set is not allocated by this product. To determine the correct storage for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old release and reclaim the space that was used by the old release and any service that had been installed. You can determine whether these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.
For more information about the names and sizes of the required data sets, see 6.1.10, “Allocate SMP/E Target and Distribution Libraries” on page 22.

3. Abbreviations used for the file system path type are as follows.
   - N New path, created by this product.
   - X Path created by this product, but might already exist from a previous release.
   - P Previously existing path, created by another product.

4. All target and distribution libraries listed have the following attributes:
   - The default name of the data set can be changed.
   - The default block size of the data set can be changed.
   - The data set can be merged with another data set that has equivalent characteristics.
   - The data set can be either a PDS or a PDSE, with some exceptions. If the value in the "ORG" column specifies "PDS", the data set must be a PDS. If the value in "DIR Blks" column specifies "N/A", the data set must be a PDSE.

5. All target libraries listed have the following attributes:
   - These data sets can be SMS-managed, but they are not required to be SMS-managed.
   - These data sets are not required to reside on the IPL volume.
   - The values in the "Member Type" column are not necessarily the actual SMP/E element types that are identified in the SMPMCS.

6. All target libraries that are listed and contain load modules have the following attributes:
   - These data sets can be in the LPA, but they are not required to be in the LPA.
   - These data sets can be in the LNKLST.
   - These data sets are not required to be APF-authorized, with some exceptions. If the value in the "Member Type" column specifies "APF", the data set must be APF-authorized.

Figure 8. Storage Requirements for SMP/E Work Data Sets

Figure 9. Storage Requirements for SMP/E Data Sets
The following figures describe the target and distribution libraries and file system paths required to install Developer for z Systems Host Utilities. The storage requirements of Developer for z Systems Host Utilities must be added to the storage required by other programs that have data in the same library or path.

**Note:** Use the data in these tables to determine which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

The rest of this section only applies when Developer for z Systems Host Utilities is downloaded from the web. It does not apply when you ordered it via Shopz.

Select this link to go to the next section. [5.3, “FMIDs Deleted” on page 15](#)

The following figures list data sets that are not used by Developer for z Systems Host Utilities, but are required as input for SMP/E.
Installing Developer for z Systems Host Utilities might result in the deletion of other FMIDs. To see which FMIDs will be deleted, examine the ++VER statement in the SMPMCS of the product. If you do not want to delete these FMIDs at this time, install Developer for z Systems Host Utilities into separate SMP/E target and distribution zones.

**Note:** These FMIDs are not automatically deleted from the Global Zone. If you want to delete these FMIDs from the Global Zone, use the SMP/E REJECT NOFMID DELETEFMID command. See the SMP/E Commands book for details.

### 5.4 Special Considerations

Developer for z Systems Host Utilities has no special considerations for the target system.
6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of Developer for z Systems Host Utilities.

Please note the following points:

- If you want to install Developer for z Systems Host Utilities into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets.
- You can use the sample jobs that are provided to perform part or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries that are required for SMP/E execution have been defined in appropriate zones.
- You can use the SMP/E dialogs instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing Developer for z Systems Host Utilities

6.1.1 SMP/E Considerations for Installing Developer for z Systems Host Utilities

Use the SMP/E RECEIVE, APPLY, and ACCEPT commands to install this release of Developer for z Systems Host Utilities.

6.1.2 SMP/E Options Subentry Values

The recommended values for certain SMP/E CSI subentries are shown in Figure 14. Using values lower than the recommended values can result in failures in the installation. DSSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. See the SMP/E manuals for instructions on updating the global zone.

<table>
<thead>
<tr>
<th>Subentry</th>

</tbody>
</table>
6.1.3 Overview of the installation steps

Overview of steps required to install IBM Developer for z Systems Host Utilities.

1. Allocate sequential data sets to hold SMPMCS and compressed RELFILEs (only applicable for web download, not Shopz orders)
2. Upload the SMPMCS and compressed RELFILEs to the host (only applicable for web download, not Shopz orders)
3. Expand the compressed RELFILEs by using the TSO RECEIVE command (only applicable for web download, not Shopz orders)

   Select this link to skip the web download specific steps: 6.1.7, “Sample Jobs” on page 20

4. Create SMP/E environment (optional)
5. Perform SMP/E RECEIVE
6. Allocate SMP/E target and distribution libraries
7. Allocate and mount z/OS UNIX file system (optional)
8. Allocate z/OS UNIX paths
9. Create DDDEF entries
10. Perform SMP/E APPLY
11. Perform SMP/E ACCEPT
12. Run REPORT CROSSZONE

6.1.4 Allocate sequential data sets to hold SMPMCS and compressed RELFILEs

This section only applies when Developer for z Systems Host Utilities is downloaded from the web. It does not apply when it is ordered via Shopz.

Select this link to skip the web download specific steps: 6.1.7, “Sample Jobs” on page 20

The SMP/E input data sets to install IBM Developer for z Systems Host Utilities are provided as binary files in the downloaded package, and must be uploaded to z/OS.

To ensure that the data sets are allocated correctly, it is advised to allocate empty data sets before uploading the data. You can use the following sample JCL to allocate the data sets. The sample JCL needs the following updates:

1. Add a JOB card and modify the allocation parameters to meet your site requirements.
2. hlq specifies the high level qualifier you choose to use for the data sets.
3. (Optional) Replace vvvvvv with the volume serial you choose to use for the data sets.
//ALLOC PROC LLQ=,
// ALLOC EXEC PGM=IEFBR14
//DATASET DD DSN=hlq.IBM.HAKGE00.&LLQ,
// DISP=(NEW,CATLG),
// RECFM=FB,LRECL=80,
// DSORG=PS,BLKSIZE=0,
// UNIT=SYSALLDA,
// VOL=SER=vvvvvv, * uncomment to specify a volser
// SPACE=(TRK,(&TRKS,5))
//EALLOC PEND
//*
//RELFILE1 EXEC ALLOC,LLQ=F1.BIN,TRKS=3
//RELFILE2 EXEC ALLOC,LLQ=F2.BIN,TRKS=9
//RELFILE3 EXEC ALLOC,LLQ=F3.BIN,TRKS=1403
//RELFILE4 EXEC ALLOC,LLQ=F4.BIN,TRKS=4081
//RELFILE5 EXEC ALLOC,LLQ=F5.BIN,TRKS=4087
//RELFILE5 EXEC ALLOC,LLQ=F6.BIN,TRKS=4143
//SMPMCS EXEC ALLOC,LLQ=SMPMCS,TRKS=1
//*

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.5 Upload the SMPMCS and compressed RELFILEs to the host

This section only applies when Developer for z Systems Host Utilities is downloaded from the web. It does not apply when it is ordered via Shopz. Select this link to skip the web download specific steps: 6.1.7, “Sample Jobs” on page 20

Upload the files in binary format from your workstation to the z/OS data sets.

In the following sample dialog, we use FTP from a Microsoft Windows command line to do the transfer. Commands or other information entered by the user are in bold, and the following values are assumed:

<table>
<thead>
<tr>
<th>Figure 15. User Entered Values</th>

6.1.6 Expand the compressed RELFILEs with TSO RECEIVE

This section only applies when Developer for z Systems Host Utilities is downloaded from the web. It does not apply when it is ordered via Shopz. Select this link to skip the web download specific steps: 6.1.7, “Sample Jobs” on page 20

The uploaded RELFILEs are in TSO TRANSMIT format and must be expanded with the TSO RECEIVE command to become usable. hlq Specifies the high level qualifier you used for the data sets you allocated in the previous step.

```
RECEIVE INDA('hlq.IBM.HAKGE00.F1.BIN')
RECEIVE INDA('hlq.IBM.HAKGE00.F2.BIN')
RECEIVE INDA('hlq.IBM.HAKGE00.F3.BIN')
RECEIVE INDA('hlq.IBM.HAKGE00.F4.BIN')
RECEIVE INDA('hlq.IBM.HAKGE00.F5.BIN')
RECEIVE INDA('hlq.IBM.HAKGE00.F6.BIN')
```

When prompted on the TSO RECEIVE commands, use the appropriate DSNAME from the list below:

```
DS('hlq.IBM.HAKGE00.F1')
DS('hlq.IBM.HAKGE00.F2')
DS('hlq.IBM.HAKGE00.F3')
DS('hlq.IBM.HAKGE00.F4')
DS('hlq.IBM.HAKGE00.F5')
DS('hlq.IBM.HAKGE00.F6')
```

6.1.7 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install Developer for z Systems Host Utilities:

<table>
<thead>
<tr>
<th>Job Name</th>
<th>Job Type</th>
<th>Description</th>
<th>RELFILE</th>
</tr>
</thead>
<tbody>
<tr>
<td>AKG1SMPE</td>
<td>SMP/E</td>
<td>Sample job to create an SMP/E environment</td>
<td>IBM.HAKGE00.F1</td>
</tr>
<tr>
<td>AKG2RCVE</td>
<td>RECEIVE</td>
<td>Sample SMP/E RECEIVE job</td>
<td>IBM.HAKGE00.F1</td>
</tr>
<tr>
<td>AKG3ALOC</td>
<td>ALLOCATE</td>
<td>Sample job to allocate target and distribution libraries</td>
<td>IBM.HAKGE00.F1</td>
</tr>
<tr>
<td>AKG4ZFS</td>
<td>ALLOMZFS</td>
<td>Sample job to allocate, create mountpoint, and mount zFS data sets</td>
<td>IBM.HAKGE00.F1</td>
</tr>
<tr>
<td>AKG5MKD</td>
<td>MKDIR</td>
<td>Sample job to invoke the supplied AKGMKDIR EXEC to allocate file system paths</td>
<td>IBM.HAKGE00.F1</td>
</tr>
<tr>
<td>AKG6DDDEF</td>
<td>DDDEF</td>
<td>Sample job to define SMP/E DDDEFs</td>
<td>IBM.HAKGE00.F1</td>
</tr>
<tr>
<td>AKG7APLY</td>
<td>APPLY</td>
<td>Sample SMP/E APPLY job</td>
<td>IBM.HAKGE00.F1</td>
</tr>
</tbody>
</table>
The rest of this section only applies when Developer for z Systems Host Utilities is ordered via Shopz. It does not apply when you downloaded it from the web.

Select this link to go to the next section: [6.1.8, “Create SMP/E environment (optional)” on page 22](#)

You can access the sample installation jobs by performing an SMP/E RECEIVE (refer to [6.1.9, “Perform SMP/E RECEIVE” on page 22](#)) then copy the jobs from the RELFILES to a work data set for editing and submission. See [Figure 16 on page 20](#) to find the appropriate relfile data set.

You can also copy the sample installation jobs from the tape or product files by submitting the following job. Depending on your distribution medium, use either the //TAPEIN or the //FILEIN DD statement and comment out or delete the other statement. Before you submit the job, add a job card and change the lowercase parameters to uppercase values to meet the requirements of your site.

```plaintext
//STEP1 EXEC PGM=IEBCOPY
//SYSPRINT DD SYSOUT=/c5197
//TAPEIN DD DSN=IBM.HAKGE/zerodot/zerodot.F1,
// DISP=(OLD,KEEP),
// LABEL=(x,SL),
// VOL=SER=volser,
// UNIT=tunit
//FILEIN DD DSN=IBM.HAKGE/zerodot/zerodot.F1,
// DISP=SHR,
//* VOL=SER=filevol,
// UNIT=SYSALLDA
//OUT DD DSNAME=jcl-library-name,
// DISP=(NEW,CATLG,DELETE),
// SPACE=(TRK,(6,5,5)),
//* VOL=SER=dasdvol,
// UNIT=SYSALLDA
//SYSUT3 DD UNIT=SYSALLDA,SPACE=(CYL,(1,1))
//SYsin DD *
COPY INDD=xxxxIN,OUTDD=OUT
/*
```

See the following information to update the statements in the previous sample:

**TAPEIN:**
- **tunit** is the unit value that matches the product package.
- **volser** is the volume serial that matches the product package.

**Note:** When Developer for z Systems Host Utilities is downloaded from the web, the RELFILE data set name will be prefixed by your chosen high level qualifier, as documented in section [6.1.6, “Expand the compressed RELFILEs with TSO RECEIVE” on page 20](#).
is the tape file number that indicates the location of the data set name on the tape. See the documentation that is provided by CBPDO for the location of IBM.HAKGE00.F1 on the tape.

FILEIN:

filevol is the volume serial of the DASD device where the downloaded files reside.

OUT:

jcl-library-name is the name of the output data set where the sample jobs are stored. dasdvol is the volume serial of the DASD device where the output data set resides. Uncomment the statement if a volume serial must be provided.

SYSIN:

xxxxIN is either TAPEIN or FILEIN depending on your input DD statement.

6.1.8 Create SMP/E environment (optional)

If you are using an existing CSI, do not run the sample job AKG1SMPE.

If you choose to create a new SMP/E environment for this install, a sample job is provided or you may choose to use your own JCL. If you choose to use the sample job provided, edit and submit AKG1SMPE. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.9 Perform SMP/E RECEIVE

If you have obtained Developer for z Systems Host Utilities as part of a CBPDO, use the RCVPDO job in the CBPDO RIMLIB data set to receive the Developer for z Systems Host Utilities FMIDs, service, and HOLDDATA that are included on the CBPDO package. For more information, see the documentation that is included in the CBPDO.

You can also choose to edit and submit sample job AKG2RCVE to perform the SMP/E RECEIVE for Developer for z Systems Host Utilities. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.10 Allocate SMP/E Target and Distribution Libraries

Edit and submit sample job AKG3ALOC to allocate the SMP/E target and distribution libraries for Developer for z Systems Host Utilities. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.
6.1.11 Allocate, create and mount ZFS Files (Optional)

This job allocates, creates a mountpoint, and mounts ZFS data sets.

If you plan to install Developer for z Systems Host Utilities into a new z/OS UNIX file system, you can edit and submit the optional AKG4ZFS job to perform the following tasks:

- Create the z/OS UNIX file system
- Create a mountpoint
- Mount the z/OS UNIX file system on the mountpoint

Consult the instructions in the sample job for more information.

The recommended z/OS UNIX file system type is ZFS. The recommended mountpoint is /usr/lpp/IBM/idzutil.

Before running the sample job to create the ZFS file system, you must ensure that OMVS is active on the driving system. ZFS must be active on the driving system if you are installing Developer for z Systems Host Utilities into a file system that is ZFS.

If you create a new file system for this product, consider updating the BPXPRMxx PARMLIB member to mount the new file system at IPL time. This action can be helpful if an IPL occurs before the installation is completed.

MOUNT FILESYSTEM('#dsn')
MOUNTPOINT('/usr/lpp/IBM/idzutil')
MODE(RDWR) /* can be MODE(READ) */
TYPE(ZFS) PARM('AGGRGROW') /* ZFS, with extents */

See the following information to update the statements in the previous sample:

#dsn is the name of the data set holding the ZFS file system.
/usr/lpp/IBM/idzutil is the name of the mountpoint where the ZFS file system will be mounted.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.12 Allocate File System Paths

The target system HFS or ZFS data set must be mounted on the driving system when running the sample AKG5MKD job since the job will create paths in the HFS or ZFS.

Before running the sample job to create the paths in the file system, you must ensure that OMVS is active on the driving system and that the target system's HFS or ZFS file system is mounted to the driving system. ZFS must be active on the driving system if you are installing Developer for z Systems Host Utilities into a file system that is ZFS.
If you plan to install Developer for z Systems Host Utilities into a new HFS or zFS file system, you must create the mountpoint and mount the new file system to the driving system for Developer for z Systems Host Utilities.

The recommended mountpoint is `/usr/lpp/IBM/idzutil`.

Edit and submit sample job AKG5MKD to allocate the HFS or zFS paths for Developer for z Systems Host Utilities. Consult the instructions in the sample job for more information.

If you create a new file system for this product, consider updating the BPXPRMxx PARMLIB member to mount the new file system at IPL time. This action can be helpful if an IPL occurs before the installation is completed.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.13 Create DDDEF Entries

Edit and submit sample job AKG6DDEF to create DDDEF entries for the SMP/E target and distribution libraries for Developer for z Systems Host Utilities. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.14 Perform SMP/E APPLY

1. Ensure that you have the latest HOLDDATA; then edit and submit sample job AKG7APLY to perform an SMP/E APPLY CHECK for Developer for z Systems Host Utilities. Consult the instructions in the sample job for more information.

   The latest HOLDDATA is available through several different portals, including http://service.software.ibm.com/holdata/390holddata.html. The latest HOLDDATA may identify HIPER and FIXCAT APARs for the FMIDs you will be installing. An APPLY CHECK will help you determine if any HIPER or FIXCAT APARs are applicable to the FMIDs you are installing. If there are any applicable HIPER or FIXCAT APARs, the APPLY CHECK will also identify fixing PTFs that will resolve the APARs, if a fixing PTF is available.

   You should install the FMIDs regardless of the status of unresolved HIPER or FIXCAT APARs. However, do not deploy the software until the unresolved HIPER and FIXCAT APARs have been analyzed to determine their applicability. That is, before deploying the software either ensure fixing PTFs are applied to resolve all HIPER or FIXCAT APARs, or ensure the problems reported by all HIPER or FIXCAT APARs are not applicable to your environment.

   To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the APPLY CHECK. The SMP/E root cause analysis identifies the cause only of errors and not of warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings, instead of errors).

   Here are sample APPLY commands:
a. To ensure that all recommended and critical service is installed with the FMIDs, receive the latest HOLDDATA and use the APPLY CHECK command as follows

```
APPLY S(fmid,fmid,...) CHECK
FORFMID(fmid,fmid,...)
SOURCEID(RSU*)
FIXCAT(IBM.ProductInstall-RequiredService)
GROUPEXTEND.
```

Some HIPER APARs might not have fixing PTFs available yet. You should analyze the symptom flags for the unresolved HIPER APARs to determine if the reported problem is applicable to your environment and if you should bypass the specific ERROR HOLDs in order to continue the installation of the FMIDs.

This method requires more initial research, but can provide resolution for all HIPERs that have fixing PTFs available and are not in a PE chain. Unresolved PEs or HIPERs might still exist and require the use of BYPASS.

b. To install the FMIDs without regard for unresolved HIPER APARs, you can add the BYPASS(HOLDCLASS(HIPER)) operand to the APPLY CHECK command. This will allow you to install FMIDs even though one or more unresolved HIPER APARs exist. After the FMIDs are installed, use the SMP/E REPORT ERRSYSMODS command to identify unresolved HIPER APARs and any fixing PTFs.

```
APPLY S(fmid,fmid,...) CHECK
FORFMID(fmid,fmid,...)
SOURCEID(RSU*)
FIXCAT(IBM.ProductInstall-RequiredService)
GROUPEXTEND
BYPASS(HOLDCLASS(HIPER)).
```

This method is quicker, but requires subsequent review of the Exception SYSMOD report produced by the REPORT ERRSYSMODS command to investigate any unresolved HIPERs. If you have received the latest HOLDDATA, you can also choose to use the REPORT MISSINGFIX command and specify Fix Category IBM.ProductInstall-RequiredService to investigate missing recommended service.

If you bypass HOLDs during the installation of the FMIDs because fixing PTFs are not yet available, you can be notified when the fixing PTFs are available by using the APAR Status Tracking (AST) function of ServiceLink or the APAR Tracking function of ResourceLink.

2. After you take actions that are indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

**Note:** The GROUPEXTEND operand indicates that SMP/E applies all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

**Expected Return Codes and Messages from APPLY CHECK:** You will receive a return code of 0 if this job runs correctly.

**Expected Return Codes and Messages from APPLY:** You will receive a return code of 0 if this job runs correctly.
6.1.15 Perform SMP/E ACCEPT

Edit and submit sample job AKG8ACPT to perform an SMP/E ACCEPT CHECK for Developer for z Systems Host Utilities. Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the ACCEPT CHECK. The SMP/E root cause analysis identifies the cause of errors but not warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings rather than errors).

Before you use SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. In this way, you can save the entries that are produced from JCLIN in the distribution zone whenever a SYSMOD that contains inline JCLIN is accepted. For more information about the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E Commands book for details.

After you take actions that are indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

Note: The GROUPEXTEND operand indicates that SMP/E accepts all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from ACCEPT CHECK: You will receive a return code of 0 if this job runs correctly.

If PTFs that contain replacement modules are accepted, SMP/E ACCEPT processing will link-edit or bind the modules into the distribution libraries. During this processing, the Linkage Editor or Binder might issue messages that indicate unresolved external references, which will result in a return code of 4 during the ACCEPT phase. You can ignore these messages, because the distribution libraries are not executable and the unresolved external references do not affect the executable system libraries.

Expected Return Codes and Messages from ACCEPT: You will receive a return code of 0 if this job runs correctly.

6.1.16 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command identifies requisites for products that are installed in separate zones. This command also creates APPLY and ACCEPT commands in the SMPPUNCH data set. You can use the APPLY and ACCEPT commands to install those cross-zone requisites that the SMP/E REPORT CROSSZONE command identifies.

After you install Developer for z Systems Host Utilities, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries that describe all the target and distribution libraries to be reported on.

For more information about REPORT CROSSZONE, see the SMP/E manuals.
6.1.17 Cleaning Up Obsolete Data Sets, Paths, and DDDEFs

The web download data sets listed in Figure 13 on page 14 (section 5.2.3, “DASD Storage Requirements” on page 12) are temporary data sets. You can delete these data sets after you complete the SMP/E install.

The following file system paths, which were created and used by previous releases of this product, are no longer used in this release. You can delete these obsolete file system paths after you delete the previous release from your system.

- /usr/lpp/rdzutil/

6.2 Activating Developer for z Systems Host Utilities

6.2.1 File System Execution

If you mount the file system in which you have installed Developer for z Systems Host Utilities in read-only mode during execution, then you do not have to take further actions to activate Developer for z Systems Host Utilities.

6.3 Product Customization

The publication *IBM Developer for z Systems Host Configuration Guide* (SC27-8577) contains the necessary information to customize and use Developer for z Systems Host Utilities.

6.4 Product FMIDs

The product in which you received Developer for z Systems Host Utilities contains multiple FMIDs, some of which provide services utilized by Developer for z Systems Host Utilities.

- IBM Developer for z Systems
  IBM Developer for z Systems provides development related services. Installation information can be found in *Program Directory for IBM Developer for z Systems* (GI11-8298).

- IBM Developer for z Systems Host Utilities
  IBM Developer for z Systems Host Utilities provides batch code analysis related services. Installation information can be found in *Program Directory for IBM Developer for z Systems Host Utilities* (GI13-2864).

- IBM z/OS Debugger
  IBM z/OS Debugger provides debug related services. Installation information can be found in *Program Directory for IBM z/OS Debugger* (GI13-4540).

Some functions in Developer for z Systems Host Utilities require services provided by IBM z/OS Debugger.
• IBM Problem Determination Tools Common Component
IBM Problem Determination Tools Common Component provides problem determination related services. Installation information can be found in Program Directory for IBM Problem Determination Tools Common Component (GI10-8969).

• IBM COBOL and CICS Command Level Conversion Aid for OS/390 and MVS and VM
IBM COBOL and CICS Command Level Conversion Aid for OS/390 and MVS and VM provides services to handle older COBOL programs. Installation information can be found in Program Directory for IBM COBOL and CICS Command Level Conversion Aid for OS/390 and MVS and VM (GI10-5080).
7.0 Notices

This information was developed for products and services offered in the U.S.A. IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user’s responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

APAR numbers are provided in this document to assist in locating PTFs that may be required. Ongoing problem reporting may result in additional APARs being created. Therefore, the APAR lists in this document may not be complete. To obtain current service recommendations and to identify current product service requirements, always contact the IBM Customer Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".
